

## Kings Park Excursion

On Tuesday 19<sup>th</sup> March, Rooms 18 and 20 went on an excursion to the Kings Park Education Centre. The students learnt about the biodiversity of the Western Australian bushland and the importance of its conservation. They undertook hands-on scientific processes to collect specimens and identify species and learn how to clean and dry seeds for future propagation.

We are the only primary school in WA to collect seeds to support the Threatened Flora Seed Centre and it is important that the students know and understand the importance of why they are collecting the seeds. The students also had fun exploring the environment of the Naturescape.

### Having fun in the Naturescape.
